

7 Safe Email Habits Everyone Should Practice

1. Pause Before You Click

- Don't rush. Take a few seconds to scan the email for red flags like urgency or strange requests.

2. Hover Over Links

- Always hover your mouse over any link to preview the real URL before clicking.

3. Avoid Opening Unexpected Attachments

- Especially if the sender is unknown or the file type is risky (e.g. [.zip](#), [.docx](#), [.exe](#), [.xls](#)).

4. Verify Suspicious Requests via Another Channel

- If something feels off—especially requests for money or sensitive info—call or message the person directly using a known, secure method.

5. Use Strong, Unique Passwords

- Don't reuse passwords across accounts. Use a password manager to keep them safe and organized.

6. Report Suspicious Emails Immediately

- At work, use your company's "Report Phishing" feature. In a personal email, mark it as phishing so your provider learns from it.

7. Keep Software Updated

- Ensure your email apps, antivirus tools, and operating system are always up to date to protect against known vulnerabilities.
